

TÜV Rheinland

The key for a successful international access
for your house and kitchenware products

We are your experts for testing and certifying cookware,
house and kitchenware products for any target market.

 **TÜVRheinland[®]**
Precisely Right.

TÜV Rheinland is an accredited and independent third party testing and certification body

As your reliable partner we offer the following services:

- Design tailor-made testing programs and procedures that meet cookware and kitchenware manufacturer's individual needs
- Extensive testing scope for all types of cookware and kitchenware articles
- Seminars and training

It is important that your products can withstand the stresses of everyday use.

To validate their ability to do so, we offer a variety of technical and functional tests, as well as partial tests to verify the minimum requirements of local standards and regulations.

		Oven suitability	Hot Resistance
		Freezer suitability	Cold Resistance
		Microbiological tests	Hygiene
		Anti microbial tests	
		Anti fungal tests	

Why TÜV Rheinland ?

Traditionally “**non-electrical**” products are generally not within the scope of the CE marking directives but this does not mean that they are to be considered less critical and with less need for their careful evaluation before they are placed on the market.

Our laboratory tests, performed according to national and international standards but also guided by a careful risk analysis, are designed to reduce the risk during daily use even, in case of certification, for any improper but foreseeable uses. Competence, professionalism, attention to the customer, services for access to international markets, are just some of the **strengths of TÜV Rheinland**.

Our laboratories, accredited by primary accreditation bodies, are fully equipped to assess the conformity to the national and international reference standards of cookware and kitchenware products for domestic use, such as pots and pans, plastic and metal storage boxes, small kitchen helpers, table ware, storage bags, insulating containers, cooking, baking and barbecue accessories, blenders, juicers, dishes and plates, kitchen and table utilities.

Our global technical team of experts with our worldwide networks or testing labs through an extended network of accredited testing laboratories can assist your product entry into different markets, from fundamental concept to post manufacturing stages.

Benefits at a glance

With products tested and certified by TÜV Rheinland laboratories you:

Tested and Certified Cookware and Kitchenware

informazioni@it.tuv.com
www.tuv.com/foodware

- ✓ Ensure compliance with legal requirements
