Professional management makes all the difference for hazardous substances.

The handling of hazardous substances not only requires a great deal of care on the part of employees. Companies and, in particular, executive managers also need to do their part. An increasing number of legal requirements need to be observed and a failure to comply can have far-reaching consequences, including criminal prosecution. TOGs®, TÜV Rheinland's on-line system for hazardous substance management, is a cost-effective and reliable service for identifying and limiting risks.

By ensuring the best possible approach to the management of hazardous substances, companies not only meet their obligations toward employees, customers, and the environment. They also prevent potential contamination and incidents that can have a detrimental effect on the company's image. Not to mention the high liability risks and the increasingly stringent regulations in the field of occupational safety and chemicals law. With TOGs®, TÜV Rheinland provides a solution that gives you legal peace of mind.

HIGHLY TRANSPARENT, DOWN TO THE SMALLEST DETAIL.

TOGs® presents you with a detailed overview of all hazardous substances used at your company, together with insight into the entire process chain, from procurement to disposal:

- Individual mapping of companies with different organizational/functional and process structures, as well as external companies
- Archiving and traceability of organizational changes at the company
- Documentation for every substance through its entire lifecycle including all changes (e.g. changes to the labeling of hazardous substances)

A UNIVERSAL BASIS FOR ALL REQUIREMENTS.

TOGs® is an integrated platform that clearly structures the entire process for managing hazardous substances. All required information can quickly be recorded in one central catalogue, evaluated, and included in the necessary documentation in a user-friendly form. This information forms the basis for risk assessments, operating instructions, and individual evaluations and reports:

- Generation of individual documents such as registers of hazardous substances, with basic data for a graded action concept, in line with Germany's new Ordinance on Hazardous Substances (GefStoffV) and relevant EU-Legislation
- Universal online access
- Connection to Operational Safety Management (OSM) systems and existing QM systems
- Central documentation for certifications
- Expert system for risk assessments, e.g. ECHA Candidate substances, joint storage prohibition
- Hazardous substance report based on a range of risk criteria.

STEP BY STEP TOWARD GREATER COST SAVINGS.

With TOGs®, you can ensure that your processes for managing hazardous substances are as cost effective as possible:

- Recording of the hazardous substances in active use – including both preparations and pure substances
- Significant cost and time savings for the management of hazardous substances – up to 70% in some cases.
- Reduction in the level of training required to a minimum: Training needs are identified using the employee competency matrix.

READY FOR THE CHANGES OF TOMORROW.

All structures within TOGs® adapt flexibly to changes within companies and the opportunities for expansion are almost unlimited. TOGs® allows you to react rapidly to the introduction of new statutory regulations or hazardous substance data:

- Constantly up-to-date information on substances through proactive database updates and change notifications
- Automatic adjustments of all downstream processes and documents following changes to general conditions
- Documentation of organizational restructuring
- Archiving of obsolete substances along with their lifecycle at the company.

LEARN MORE.

TOGs® is more than just software. It is part of a comprehensive package of services designed to help keep your hazardous substance management running smoothly and efficiently. Benefit from the longstanding experience of TÜV Rheinland in the management of hazardous substances and discover just what we can do for you.
