

Municipal climate protection

Sustainability	Energy technology	Industrial fittings / SIL
Greenhouse gas inventories & ETS	Energy certification	Eco-design & emission monitoring
Municipal climate protection	Mechanical components	Certification of energy appliances
Energy management	Electrical components	Approval of energy appliances

Climate change is the greatest challenge facing the human race of the 21st century. It has an extensive influence on people, animals and plants and thus on our entire ecosystem. The international community has agreed to limit global warming to 2°, which requires radical reductions in greenhouse gas emissions. International debates regarding binding climate protection goals are still ongoing, although many national and local governments are nevertheless actively implementing climate protection measures according to their own means.

The time has come to take action. Revisions of regional legislation mean that **binding climate protection measures in cities** are foreseeable. The Federal Ministry for the Environment (BMU) supports the climate protection concepts drawn up by proactive municipalities.

The experts at TÜV Rheinland have many years of experience in the fields of energy efficiency, building technologies, heat generation and environmental technology. We are happy to support cities and municipalities with our expertise. We advise you during the preparation phase, support you in drawing up appropriate concepts and assist you in the subsequent implementation of your climate protection measures.

Our services. For you.

- Creation of (partial) municipal climate protection concepts
- Consultancy services as an “introduction” to municipal climate protection
- Implementation of measures from municipal climate protection concepts
- Development and support of climate protection projects

Municipal climate protection – why? Because...

- ... it identifies energy saving potential.
- ... it sustainably promotes regional added value.
- ... it communicates your climate awareness.

You want more. Just ask us.

We offer additional services to support you in the implementation of measures.

We are the specialists in the field of Energy Management Services.

We perform project planning for the specific measures to be implemented, e.g. climate protection technologies at decommissioned municipal waste plants.

We advise you in selected individual measures.

We look forward to hearing from you.

Always a good sign.

This mark stands for all the information about products, services and systems that are tested, certified or inspected by TÜV Rheinland.

Transparent, available anytime worldwide – powerful and unique.
The TÜV Rheinland test mark.
