### Green Product Mark: for Toys with a small environmental impact

As children are our future, their toys should not only be safe, but also leave a low environmental impact. The awareness from consumers towards greener and sustainability products rises and so does the demands from Buyers. The introduction of an independent certification mark issued by a third-party entity, which demonstrates compliance with the various sustainability regulations and requirements, will help manufacturers to promote their eco-friendly products with one mark in a more direct, fast and efficient way. The content of environmental-friendly materials, the use of non-hazardous substances and sustainable performance are major factors in consumers' perceptions of consumer products. They demonstrate the commitment of brand name owners to the environment, sustainability and society.

TÜV Rheinland's Green Product Mark is a voluntary sustainability mark for consumer products that will give end consumers and buyers guidance in identifying green and sustainable products in the often crowded market place. The Green Product Mark, along with the related regulatory requirements, aims to minimise the impact of consumer products on the environment. Children are our future, let's build a greener future together.
