

NOM-004-STPS-1999

Protection Systems and Safety Devices
in Machinery and Equipment used in the
Work Centers.

In Mexico, among the leading causes of temporary and permanent disabling accidents have involved the operation of machinery.

That is why the Federal Labor Law and Regulations focus efforts so that all machinery workplaces comply with NOM-004-STPS-1999. Which establishes the safety conditions of machinery and equipment and we tell you how, or, we dictate their compliance in a registry with validity of five years.

TÜV Rheinland offers the services of studies for the detection of hazards, risk assessment in general and especially for the interaction man-machinery and equipment. In addition to the certification of your work center and the analyzes that will help you to lower the incidence of serious accidents that generate many lost days and control them they would also dictate compliance with the workplace by the risks in the machinery through its accredited Verification Unit and authorized by the Ministry of Labor and Social Security (STPS).

Our staff is a group of experts who will help you identify, evaluate and control work risks and develop measures to prevent unsafe acts and conditions that could lead to an accident or work sickness, through Safety Diagnostics and other innovative alternatives.

BENEFITS OF COMPLYING WITH THE MEXICAN STPS REGULATIONS

Avoid accidents that lead to production stoppages and therefore economic losses or delays in delivery.

- Increased productivity, due to the decrease of machinery failures.
- Chain assurance client / vendor supply to reach dates.
- Reduced personnel turnover due to decrease in days lost to the IMSS.
- Better working environment because workers see changes and improvements.

WHAT HAPPENS IF I DO NOT COMPLY WITH THIS STANDARD?

In addition to the fact that the work center can be subject to penalties and fines by the authorities, incapacitating accidents could be habitual and may lose even high percentages for compensation payments, expenses for accident investigation, litigation before conciliation and arbitration premium increase Social Security, stop by processes accident investigation, periodic breakdown, rent machinery, delivery delays, loss of customers machinery for lack of quality.

Why Choose TÜV Rheinland?

Our extensive experience in tests, inspections and certifications, give us the vision of what applies in other countries to give innovative solutions, as well as the quality, safety and environmental assurance that are very important commercial factors in the competitive world.
